

The Homosexual Life is Anything but "GAY"

Take a random sample of homosexual men in their 30's and this is what you'll find.

- ☐ Only **one** is faithful to his partner, and within a year that relationship will end.
- ☐ **Eight** of these men have a sexually transmitted disease: 3 are HIV positive; 1 has AIDS.
- ☐ **Three** are currently alcoholics.
- ☐ **Four** have experienced chronic depression.
- ☐ **Three** have considered suicide and two have actually attempted it.
- ☐ The average age of homosexuals dying with AIDS is **39**.
- ☐ The average age of homosexuals dying of all other causes is **41**.
- ☐ Only **1%** of homosexuals live to be 65 or older.
